

# Ground Penetrating Radar

*Valuable tool for blind utility search  
& structural concrete scanning.*

## Subsurface Utility Scanning

Saving Money and time with no need to block traffic or perform surveys during the night Great increase in accuracy with a detection accuracy of as little as 5 cm (2 inches). Great productivity and able to detect every buried target, weather running horizontally or vertically down the street. This highly modular structure allows it to be reconfigured to map sidewalks and difficult to access areas.

## Structural Concrete Scanning

The assessment of concrete structures is becoming increasingly important. More and more General Contractors are requiring the concrete be scanned before any cutting, drilling or coring operation is to commence. BESS is one of the pioneers in the use of GPR in Northern California. Our technicians have the training and experience to provide our clients with a service that set us apart from our competitors.
